FOCUS GASTROENTEROLOGY

15 April 2026

Dr Patricia Civitico
Collins Place Medical Clinic

Dear Dr Civitico,

Re: Dr Rosemary Sutton
DOB: 1962-01-21
Address: 508/499 St Kilda Road, MELBOURNE VIC 3000

Summary

- **Improvement in symptoms of abdominal pain and bloating.**
- **Maintenance of gastrointestinal stability despite significant psychosocial stressors.**
- **Continuation of fluoxetine and prucalopride with plan to wean stimulant laxatives.**
- **Ongoing allied health review regarding bowel routine.**
- **No action required by you.**

I had the pleasure of conducting a telehealth review with Rosemary Sutton. She reports that she is gradually improving and feels generally well. Most notably, there has been a significant reduction in the frequency and severity of her abdominal pain and bloating. While bloating remains her most prominent gastrointestinal symptom, she describes it as moderate and significantly improved compared to her previous baseline. She did note that her bowel regularity remains susceptible to disruptions in her daily routine, which was evident during a recent period of travel.

We discussed the role of fluoxetine in modulating her gut-brain axis symptoms. Rosemary believes the medication has been beneficial in blunting the severity of her daily symptoms, which is particularly encouraging given the significant psychosocial pressure she is currently facing. Her brother remains critically unwell in the intensive care unit, and she has recently experienced a family bereavement. Despite these stressors, her gastrointestinal health has remained relatively stable. She is also successfully incorporating mindfulness and meditation into her management strategy.

FOCUS GASTROENTEROLOGY

Rosemary is continuing her work with Angela to address her bowel habit. While she has not yet successfully weaned off senna, she is maintaining a reasonable pattern overall. She continues to use prucalopride to manage her motility.

Impression and Plan

Rosemary's clinical trajectory is positive. The fact that her symptoms have not flared significantly despite her current personal circumstances suggests that the current pharmacological and mindfulness strategies are effective. I have encouraged her to continue her sessions with Angela to further refine her bowel routine and work towards weaning her reliance on stimulant laxatives. I have asked Rosemary to schedule a follow-up review with me after she has completed two further sessions with Angela. I will provide repeat prescriptions for her fluoxetine and prucalopride as required.

Kind regards

Yours sincerely,

A/Prof Chamara Basnayake
