FOCUS GASTROENTEROLOGY

17 April 2026

Dr Dejan Fiser
Medical One

Dear Dr Fiser,

Re: Mr William Willmott
DOB: 1990-10-11
Address: 2/60 Sycamore Grove, BALACLAVA, VIC, 3183

Just an FYI, histology from the Gastroscopy was normal please see below. He is on waitlist for repeat colonoscopy

Yours sincerely,

A/Prof Chamara Basnayake
Gastroenterologist

Investigation Results:

WILLMOTT, WILLIAM JOHN : SVH 1265260

DOB: 11/10/1990 Age: 35 years

2/60 Sycamore Grove, Balaclava 3183

Results from 27/03/2026 ..... Episode# 26P249323 Test Hist (Histology - Routine)

FINAL ANATOMICAL PATHOLOGY AAnat

Lab #: 2026B008229 **CLINICAL NOTES** ? H. pylori. ? Coeliac. **MACROSCOPIC DESCRIPTION** 1. Specimen labelled "Gastric bx". Two mucosal fragments measuring 2-3 mm. A1. 2. Specimen labelled "D1 bx". Four mucosal fragments measuring 2-4 mm. A1. 3. Specimen labelled "D2 bx".

FOCUS GASTROENTEROLOGY

Two mucosal fragments measuring 2-3 mm. A1. **MICROSCOPIC DESCRIPTION And DIAGNOSIS** **1. Gastric biopsy - Gastric mucosa with reactive changes including ectatic thin vessels in the lamina propria seen. - Differential diagnoses include reactive gastropathy pattern and mucosa proximity to erosion. Please correlate with endoscopy for interpretation. No Helicobacter pylori, intestinal metaplasia, dysplasia or malignancy is seen. 2. D1 biopsy - Partly tangentially sectioned, fragmented and crushed duodenal mucosa with focal ectatic vessels seen, may represent minor peptic duodenitis. No convincing histological features of untreated Coeliac disease identified. Within the limitation of artefacts no convincing villous atrophy identified. No intraepithelial lymphocytosis present. No parasites, granulomas, dysplasia or malignancy seen. 3. D2 biopsy - Within normal limits. No histological features of untreated Coeliac disease identified. Partly fragmented, crushed and tangentially sectioned benign duodenal mucosa is seen. Within the limitation of artefacts the villous configuration appears preserved. No convincing intraepithelial lymphocytosis, parasites, granulomas, dysplasia or malignancy identified.** Pathologist: Dr Sureshni Jayasinghe
