FOCUS GASTROENTEROLOGY

22 April 2026

Dr Ashleigh Keating
Turn The Corner Medical Clinic

Dear Dr Keating,

Re: Miss Kathrine Zambellakis
DOB: 1990-09-27
Address: 21 Hosken Street, RESERVOIR, VIC, 3073

Summary

- **Gastroscopy and biopsies excluding malignancy, coeliac disease, and Helicobacter pylori.**
- **Resolution of functional dyspepsia symptoms coinciding with a reduction in psychosocial stressors.**
- **Management plan for nortriptyline if symptoms recur in the future.**
- **USS recommended for gall bladder polyps in 12 months.**

I had the pleasure of conducting a review with Kathrine to discuss the results of her recent gastroscopy. I am pleased to report that the procedure and subsequent histological analysis revealed no significant pathology.

The biopsies definitively excluded Helicobacter pylori infection and coeliac disease. There was no evidence of malignancy, early-stage neoplastic changes, or reflux-related oesophagitis. Structurally, the gastroscopy was entirely normal, and there are no histological findings to explain her previous symptoms.

Kathrine reports a significant improvement in her clinical state since we last met. Her previous symptoms of abdominal pain and early satiety have largely resolved. We discussed the likelihood that these symptoms were mediated by significant psychosocial stressors which were prevalent at the time of her initial presentation. As she is currently asymptomatic, we have agreed that commencing new pharmacotherapy at this stage is unnecessary.

FOCUS GASTROENTEROLOGY

Impression and Plan My clinical impression is that Kathrine experienced an episode of functional dyspepsia triggered by stress. We have discussed a contingency plan should these symptoms recur. I have suggested that gut-directed hypnosis or a low-dose tricyclic antidepressant, such as nortriptyline, would be the preferred next steps. I have explained that nortriptyline is effective for modulating the gut-brain axis and typically requires a 12-month course to allow for the resetting of visceral receptors.

Kathrine is currently taking lamotrigine for premenstrual dysphoric disorder. I have advised her that if her gastrointestinal symptoms return and become persistent, she may consult with you to initiate a trial of nortriptyline or return to my rooms for further management. Thank you very much for including me in Kathrines care.

Yours sincerely,

A/Prof Chamara Basnayake
Gastroenterologist

Investigation Results:

Zambellakis, Kathrine : HHS 176313

DOB: 27/09/1990 Age: 35 years

21 Hosken Street, Reservoir 3073

Results from 26/03/2026 ..... Episode# 26P244450 Test Hist (Histology - Routine)

FINAL ANATOMICAL PATHOLOGY AAnat

Lab #: 2026B008138 **CLINICAL NOTES** Gas= N Duo= N Oesophagus= N Mild reflux. S+S Pain,nausea. **MACROSCOPIC DESCRIPTION** 1. Specimen labelled "oesophagus". Three mucosal fragments measuring 2-3 mm. A1. 2. Specimen labelled "Gastric". Two mucosal fragments measuring 3-4 mm. A1. 3. Specimen labelled "Duodenum". Five mucosal fragments measuring 2-4 mm. A1. **MICROSCOPIC DESCRIPTION** 1. The biopsy shows three fragments of squamous

FOCUS GASTROENTEROLOGY

epithelium with minimal attached stroma. No active inflammation, organisms, intestinal metaplasia, dysplasia or malignancy is identified. Intraepithelial eosinophils are not a feature. 2. The biopsy shows two fragments of non-specialised gastric mucosa mildly increased plasma cells in the lamina propria. No significant active inflammation is seen and Helicobacter pylori like organisms are not identified. There is no evidence of intestinal metaplasia, dysplasia or malignancy. 3. The biopsy shows fragments of duodenal mucosa with villous architecture and Brunner's glands. There is no villous blunting or increased intraepithelial lymphocytes. No active inflammation is seen. There is no evidence of ulceration, organisms, granuloma formation, dysplasia or malignancy.
PATHOLOGIST'S OPINION 1. Oesophagus biopsy: Within normal limits. 2. Gastric biopsy: Mild inactive chronic gastritis. 3. Duodenum biopsy: Within normal limits. Pathologist: Dr Joan Wang SNOMED T#: 63 SNOMED M#: 43000
