Dear Dr Illing,

Re: Miss Poppy Kennedy
DOB: 20/10/2006 Phone: 0407696320
Address: 6 Mari Close, GREENSBOROUGH, VIC, 3088
Email: poppyleila.kennedy@gmail.com

Summary

- **Resolution of previously documented Crohn's oesophagitis on recent gastroscopy.**
- **Ongoing reflux symptoms likely secondary to functional visceral hypersensitivity in the context of life stressors.**
- **Plan to wean pantoprazole as symptoms stabilise.**
- **Surveillance intestinal ultrasound and bloods in six months.**
- **No action required by you.**

I had the pleasure of reviewing Poppy Kennedy following her recent gastroscopy. As you may recall, her initial procedure demonstrated significant ulceration, and the biopsies at that time were consistent with Crohn's oesophagitis. I am pleased to report that her most recent gastroscopy showed a healthy, normal-appearing oesophagus, and the biopsies have confirmed this resolution.

Despite the macroscopic and histological improvement, Poppy continues to experience symptoms of reflux. We explored the history of these symptoms, which seem to have emerged relatively recently. It appears that she is currently navigating significant life stressors. I have explained to Poppy that stress can significantly amplify the signals the brain detects from the oesophagus and can also impact gastric motility. I suspect this visceral hypersensitivity and delayed emptying are the primary drivers of her current symptoms, rather than active inflammatory disease.

Impression and Plan My plan is to keep Poppy on her current dose of pantoprazole for the time being. I have provided her with a prescription for a lower dose so that she can begin a weaning process once her symptoms are better controlled and her stress levels have subsided. I have cautioned her about the likelihood of acid rebound symptoms for the first two weeks after eventually ceasing the medication.

From a luminal Crohn's perspective, her bowel habit is currently stable. I do not believe she requires a colonoscopy this year and we can likely defer that for a further 12 to 24 months. I have arranged for her to undergo a non-urgent intestinal ultrasound and will review her again in six months with updated blood results.

Yours sincerely,

All appointments and enquires
