Dr Chung Ping Ben Ooi
Medical Hub @RMIT

Dear Dr Ooi,

Re: Mr Adam Da Cruz
DOB: 26/06/1990 Phone: 0415 734 784
Address: 7 / 97-99 Epsom Road, ASCOT VALE, VIC, 3032
Email: adam.da.cruz@gmail.com

Summary

- **Confirmed on the public waiting list for surveillance colonoscopy.**
- **Improved bowel symptoms with psyllium husk and high fibre diet.**
- **Procedure required for follow-up of a prior piecemeal polyp resection.**
- **No action required by you.**

I had the pleasure of conducting a review with Adam Da Cruz. He attended the clinic today primarily to clarify his status on the public hospital waiting list, as he was concerned by the lack of communication regarding his upcoming colonoscopy.

I have been able to log in to the St. Vincent's Hospital system and confirm that he is indeed on the waiting list, having been added in April. I explained to Adam that the current wait times for non-urgent surveillance can often extend to 18 months. Clinically, he is doing very well. His bowel habits have actually improved since our last review, which he attributes to the regular use of psyllium husk and a high-fibre diet. He reports only very occasional, minor rectal bleeding every few months, but no major pain or change in bowel frequency. He remains very fit and active.

From a clinical perspective, this colonoscopy is important as his previous procedure involved a piecemeal resection of a polyp, and he has a significant family history of bowel cancer.

Impression and Plan I have reassured Adam that he is correctly registered in the system. I will send an email to the hospital to nudge his priority, with the aim of having the procedure completed within the next few months. We discussed that if the coming colonoscopy shows a high polyp burden again, we will likely continue with 12 to 18-month surveillance intervals; however, if the site of the piecemeal resection is clear and no further polyps are identified, we may be able to extend his surveillance to three years.

I will review him via telehealth approximately three weeks after his procedure has been performed to discuss the histological findings. I note you have already provided him with an indefinite referral, for which I am grateful.

Yours sincerely,
