Dr Jhanavi Iyer
Esat Melbourne Heart And Lung

Dear Dr Iyer,

Re: Mr William Willmott
DOB: 11/10/1990 Phone: 0425 850 838
Address: 2/60 Sycamore Grove, BALACLAVA, VIC, 3183
Email: j.willmott@live.com
Medicare: 3561223533 / 1

- **Recurrent infections requiring more than 12 courses of antibiotics per year.**
- **Borderline neutropenia with a most recent neutrophil count of 1.6.**
- **History of chronic sinusitis and known cat allergy.**
- **Concurrent gastrointestinal investigations pending, though felt unrelated to the frequency of his infections.**
- **For your expert review and clinical opinion regarding a potential underlying immune deficiency.**

Jhanavi I would be grateful if you might consider seeing William. In Williams case it's a question about immunodeficiency - if this doesnt strictly meet your expertise please let me know.

William has a long-standing history of recurrent infections. He describes a cycle of chronic sinusitis and throat infections that have necessitated over 12 courses of antibiotics annually, frequently requiring 10-day courses of Augmentin. Despite a previous tonsillectomy, his symptoms have shifted towards the sinuses, with recent episodes involving purulent discharge.

Regarding his haematological profile, we have noted a persistent borderline neutropenia. His most recent neutrophil count was 1.6, with previous results fluctuating between 1.9 and 3.3. While these counts are only marginally below the reference range, they are notable given his clinical history of poor infection control. He has previously undergone screening for common immune deficiencies and autoimmune conditions, all of which have returned negative results.

William also notes a known allergy to cats and continues to live with a feline. He has previously seen an ENT specialist who reported a relatively normal sinus scan.

From a gastroenterology perspective, we are currently investigating William for low iron studies . I should note, however, that I do not believe these gastrointestinal findings are related to his systemic susceptibility to infection or his recurrent sinus issues.

Given the excessive frequency of antibiotic use and the borderline neutropenia, I would appreciate your expert assessment to determine if there is an underlying primary or secondary immune deficiency that
